logic pset3

Resources: Lecture 3 and Chapters 3 and 5 of *How Logic Works*. (Note that we are skipping over Chapter 4 for now.)

A. Proofs

Use any of the rules of inference, including reductio ad absurdum, to prove the following sequents.

2.
$$P \rightarrow Q \vdash \neg P \lor Q$$

3.
$$P \to (Q \lor R) \vdash (P \to Q) \lor R$$

My strategy here is to assume the negation of the conclusion for reductio ad absurdum. Following the same pattern as DeMorgan's, we get $\neg (P \to Q)$ and $\neg R$. The former implies $P \land \neg Q$. So we have $P, P \to (Q \lor R), \neg Q$ and $\neg R$. These form an inconsistent set.

There are other strategies that might be more intelligible, but yield a longer proof. For example, $P \to (Q \lor R)$ implies $\neg P \lor (Q \lor R)$, which implies $(\neg P \lor Q) \lor R$, which implies $(P \to Q) \lor R$.

```
P \to (Q \lor R)
        (1)
                                                            Α
               \neg((P \to Q) \lor R)
  2
                                                            Α
  3
        (3)
                                                            Α
        (4)
  4
                                                            Α
                P \wedge \neg P
        (5)
                                                            3,4 \land I

```

B. Truth tables

- 1. Use truth table reasoning to show that $P \vee (Q \wedge R) \models P \vee Q$. You don't have to display a full truth table, but if you do, explain how the table demonstrates the result.
- 2. Use truth table reasoning to show that $P \to (Q \lor R) \not\models P \to Q$.
- 3. Use truth table reasoning to show that the following "proof" must have a mistake.

1	(1)	$P \lor Q$	A
2	(2)	P	A
3	(3)	Q	A
2,3	(4)	$P \wedge Q$	$2,3 \land I$
2,3	(5)	P	$4 \wedge E$
1	(6)	P	$1,2,2,3,5 \vee E$
